Sounds pretty technical. This might be a better discussion to have in the #develop channel.

You Want The Details?

We respect that... we like details too! Find out all the latest changes in the release notes below.

McKinley 5.0 - Date: 7/25/2016

API

- Added two new REST Endpoints: /api/Groups/ByLocation and ~api/Groups/ByLatLong.
- Added file upload REST endpoint for BinaryFilesController.

CALENDAR

- Added ability to group event occurrences in the calendar by event.
- Added ability to follow an Event Item.
- Updated core Calendar.lava and EventItemList.lava to display the date range of an Event instead of just the first date/time if the event occurrence spans multiple days.
- Updated CalendarItem.lava to show all the dates of an event instead of just the first one if the event occurs on multiple dates.
- Added context object to EventItemListLava block.
- Updated EventItemListLava block so that campuses is not required.
- Updated calendar to no longer lose selected date when switching between view modes (Fixes #1392).

CHECK-IN

- Added 'Family' check-in functionality to allow checking in multiple family members at the same time.
- Update Check-in Configuration to make it easier to modify settings and edit a large number of areas/groups.
- Updated the check-in welcome message that is displayed when there are not any more active schedules so that it reflects that it is only considering schedules for the current day.
- Updated the check-in manager to exclude people who have checked out
- Updated Check-in Manager to display the Attendance Code for each person currently checked into a location
- Updated the Check-in Manager's person profile check-in history to include the security code for each check-in.
- Added 'GroupMembers' as an available merge field on check-in labels that will contain the group member record for the groups that person is checking into if they are a member of those groups. This Lava would print the role of person in group:
- Refactored Attendance Analytics to improve performance
